

Monitor Audio Hyphn

WINNER
INNOVATION

Monitor Audio's Hyphn floorstanding loudspeaker is a ground-breaking design that challenges the traditional concepts (and looks) of passive loudspeakers. It features two separate enclosures joined by a multi-driver assembly called 'M-Array,' which consists of ceramic-coated aluminium magnesium bass drivers. Meanwhile, the cabinet is made of an acrylic stone material, providing rigidity and inertness for optimal performance. The speaker also boasts a compact and complex multi-driver midrange and tweeter assembly that offers exemplary off-axis performance and soundstage clarity.

Hyphn's performance is impressive. Its bass is weighty and detailed, with precise attack and decay, providing confidence and positivity to the rhythms. The top end is equally assertive and informative, with crisp and tonally convincing treble. The crossover between the low-end, midrange, and top end is seamless, creating an authentic and engaging listening experience. The speaker's dynamic headroom is considerable and maintains composure even at significant volume levels. The soundstage presentation is remarkable, with sharp focus, impressive separation, and accurate representation of spaces and silences.

Hyphn demonstrates Monitor Audio's commitment to innovation and excellence. It is not only visually striking but also delivers an unmatched level of performance. As Simon Lucas said, "The Monitor Audio Hyphn is among the most impressive loudspeakers around, at any price." Its meticulous design and engineering make it a standout product in the market. The Hyphn represents both Monitor Audio's past achievements and its future potential.
